### **DETAILED ACTION**

1. Claims 1-31 are pending.
2. The previous restriction requirement contained a typo inadvertently leaving out Group III including claims 28-31. The instant restriction requirement corrects this typo.

### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-11 and 17-27, drawn to a method of screening incoming packets including methods of tearing detecting tunnel establishment, tunnel tear down, and requesting tunnel tear down, classified in class 726, subclass 13.
- II. Claims 12-16, drawn to a method of screening packets including applying policies to determine whether to clear a firewall session, classified in class 726, subclass 12.
- III. Claims 28-31, drawn to a method of screening incoming packets and signaling a firewall to alert of an attack, classified in class 726, subclass 11.

The inventions are distinct, each from the other because of the following reasons:

Inventions I, II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not

Art Unit: 2134

overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, subcombination I has separate utility such as allowing the tearing down of a tunnel and removal of the firewall session while subcombination II has separate utility of applying policies to determine whether to request a firewall session clear. Further, subcombination III has separate utility such as the detection and alerting of an attack on the network. See MPEP § 806.05(d).

The examiner has required restriction between subcombinations usable together. Where applicant elects a subcombination and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 2134

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.
